Journal of the Optical Society of Korea, Vol. 19, No. 1, pp. 13-21 February 2015

Efficient Logical Topology Design Considering Multiperiod Traffic in IP-over-WDM Networks

Bingbing Li¹ and Young-Chon Kim^{1,2*}

¹Department of Computer Engineering, Chonbuk National University, Jeonju 561-756, Korea

²Smart Grid Research Center, Chonbuk National University, Jeonju 561-756, Korea

In our paper, there were typographic mistakes in Table 3 and Table 4. Table 4 was not included, and the caption of Table 3 was entitled as that of Table 4. Table 3 and Table 4 with correct captions are below:

Table 3. Traffic Matrix for COST239

Node	1	2	3	4	5	6	7	8	9	10	11
1	0	1	1	3	1	1	1	35	1	1	1
2	1	0	5	14	40	1	1	10	3	2	3
3	1	5	0	16	24	1	1	5	3	1	2
4	3	14	16	0	6	2	2	21	81	9	9
5	1	40	24	6	0	1	11	6	11	1	2
6	1	1	1	2	1	0	1	1	1	1	1
7	1	1	1	2	11	1	0	1	1	1	1
8	35	10	5	21	6	1	1	0	6	2	5
9	1	3	3	81	11	1	1	6	0	51	6
10	1	2	1	9	1	1	1	2	51	0	81
11	1	3	2	9	2	1	1	5	6	81	0

Table 4. PC of network devices

Device	Power Consumption
Transponder	34.5 Watt (10 Gbps) 175 Watt (40 Gbps)
Optical Switching	1.5 Watt per 10 Gbps wavelength 4 Watt per 40 Gbps wavelength
Electronic Processing	14.5 Watt (per 1 Gbps)
